

## FARMMAP4D LITE

FarmMap4D Lite is our entry level rural mapping product giving farmers a great tool to establish and manage their farm infrastructure requirements. Lite can measure and edit the property boundary, paddocks, waterpoints and other farm infrastructure and archive a full detailed asset register to a downloadable file. All assets are georeferenced and able to be downloaded onto a mobile device. Onboarding and support services will be available to suit your needs.

### Features

- ✓ **Digital Farm Mapping:** Use high-resolution satellite imagery to map all your farm infrastructure assets and paddocks. Create a detailed asset register and reports on the length of fences, area and perimeters of paddocks and depreciation schedules. Edit and plan new infrastructure. Produce high quality maps georeferenced ready for printing to give to your bank manager or load onto a smartphone.
  
- ✓ **Property Infrastructure Analysis:** Rapidly analyse your water and fencing infrastructure in terms of distance, access, and seasonality. Plan where pipes and troughs will be put based on terrain and slope, and accurately calculate the length of pipe or fencing over the actual terrain surface. Cost capital expenditure plans based on scenarios which are saved for reference. Save days and weeks of driving, and costly GPS surveys. Download plans to your GPS or smartphone for field verification and monitoring.
  
- ✓ **Base Map Layer:** Provide a different context view behind the main infrastructure data layers. These layers cannot be edited but do provide various images to help you digitize existing infrastructure, and plan for new infrastructure. We offer a suite of satellite platforms including Landsat, Sentinel and ESRI –used interchangeably for quality of resolution, regularity of the refresh period and length of historical recording.

# The benefits of FarmMap4D

## Secure online access

Access comprehensive time series satellite and onground data securely through a simple online interface.

## Map and monitor

Map and monitor ground cover, land infrastructure and changes in farm management practices to better understand your business.

## Tailor analysis

Tailor proprietary applications to analyse and improve farm management profitability and investment decisions.

## Improve sustainability

Support decisions on long-term safe carrying capacity and systematic monitoring of ground cover dynamics.

### FarmMap4D data management tools

	<b>Premium</b> \$900+gst/year	<b>Standard</b> \$500+gst/year	<b>Lite</b> \$300+gst/year
